PB500

Tintable PU Primer DTM/ Transparent Sealer

INDUSTRIAL MIX

The Optimum Foundation for any System

PB500 is a high performance 2K DTM polyurethane, multi-substrate primer with excellent corrosion protection and adhesion properties.

PB500 was developed to meet the needs of the industrial, agricultural, mining and commercial vehicle market segments, with a blend of durability and productivity characteristics.

PB500 offers great flexibility as it is compatible with a wide number of commonly used substrates including steel, galvanized steel, aluminium and GFRC.

Furthermore, PB500 may be used as both a transparent, adhesion-promoting sealer for refurbishment work or a tinted primer creating a high covering primer available in a full colour range.

Matching the primer to the topcoat colour enhances topcoat coverage and assists in masking cosmetic damages that may occur between maintenance cycles.

PB500 offers the applicator application flexibility with a range of activators and thinners available to cater for different job sizes or ambient conditions.

PRODUCT FEATURES

Excellent adhesion and corrosion protection

Multi-substrate technology

Suitable for use as a sealer or primer

Tintable to a full range of solid colours

Flexible application with choice of activator/
thinner combinations
